**a**

period of the annual mode (years)

1.10
1.05
1.00
0.95

1.00 ± 0.05 years,
n = 83 of 87

**b**

level (interval contains zero), n = 72
decays (interval above zero), n = 13
grows (interval below zero), n = 2
eigenvalue zero by structure, n = 4

decay rate of the real mode ($yr^{-1}$)

2.5
2.0
1.5
1.0
0.5
0.0
−0.5
−1.0

e-folding time
of 2 years

|decay rate| < 0.05 /yr,
e-folding time of
20 years or more

0
20
40
60
80

valid Bayesian-ARGOS latent models (n = 87), sorted by the decay rate of the real mode
